

# It's time to talk about hemorrhoids and **Ultroid™**

The **Ultroid™** technology is a safe, effective, painless hemorrhoid treatment. Unlike surgery, **Ultroid™** is a non-invasive procedure performed in the doctor's office without anesthesia.

**Ultroid™** has been clinically proved to be greater than 85 percent effective in treating Grades I through III and some Grade IV internal and mixed hemorrhoids.

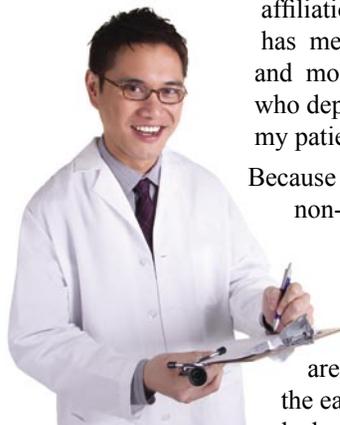

**Ultroid™** is a simple, painless treatment that allows the patient the ability to leave the doctor's office and proceed with a normally active day.

Non-invasive, non-surgical FDA recognized and approved by most insurers including Medicare, **Ultroid™** is a painless hemorrhoid treatment enthusiastically recommended by doctors and patients.

## My practice is a reflection of many things.

not the least of which is the pride I take in my ability and the superior care I try to afford all my patients. With that in mind, I thought I should share with you just what my affiliation with the **Ultroid™** system has meant to me, my practice and most importantly, the people who depend on me for their health, my patients.

Because the procedure is a non-invasive, non-surgical one, I am able to perform it in my examining room without the need of anesthesia. My patients are constantly amazed at the ease of the treatment, the lack of pain and the fact that they

are able to walk from the office and return to work, if they want to.

There are obvious benefits for my practice, as well. No surgery means no threat of infection through an invasive procedure. It also means no additional insurance premiums which translates into better business operating margins.

Once again, let me thank you for introducing me to what has to be the easiest and most effective addition to anyone's practice. With **Ultroid™**, it certainly looks like everyone is a winner. -- Dr. Dac Vu, Houston

# Eighty percent of us . . .

. . . will suffer from the same embarrassing, debilitating condition in our lifetimes. That's 4 out of every 5 people who share the same painful, itching and bleeding that people all over the world quietly endure.

And you know what? *They don't have to.* There is a painless, non-surgical remedy, covered by Medicare and most other insurers that can make your life comfortable once more.

## What are hemorrhoids?

Hemorrhoids are swollen blood vessels in and around the anus and lower rectum that stretch under pressure. Hemorrhoids are very similar to varicose veins in the legs.

Hemorrhoids may occur inside the anus (internal) or under the skin around the anus (external).

Hemorrhoids are identified by Grade.

*Grade I* hemorrhoids project into the anal canal and often bleed

but do not extend outside of the anus.

*Grade II* hemorrhoids may protrude beyond the anal verge with straining or defecating but reduce spontaneously when straining ceases.

*Grade III* hemorrhoids protrude spontaneously or with straining and require manual manipulation for return inside the anal cavity.

*Grade IV* hemorrhoids chronically extend outside of the anus and cannot be returned. They usually contain both internal and external components.

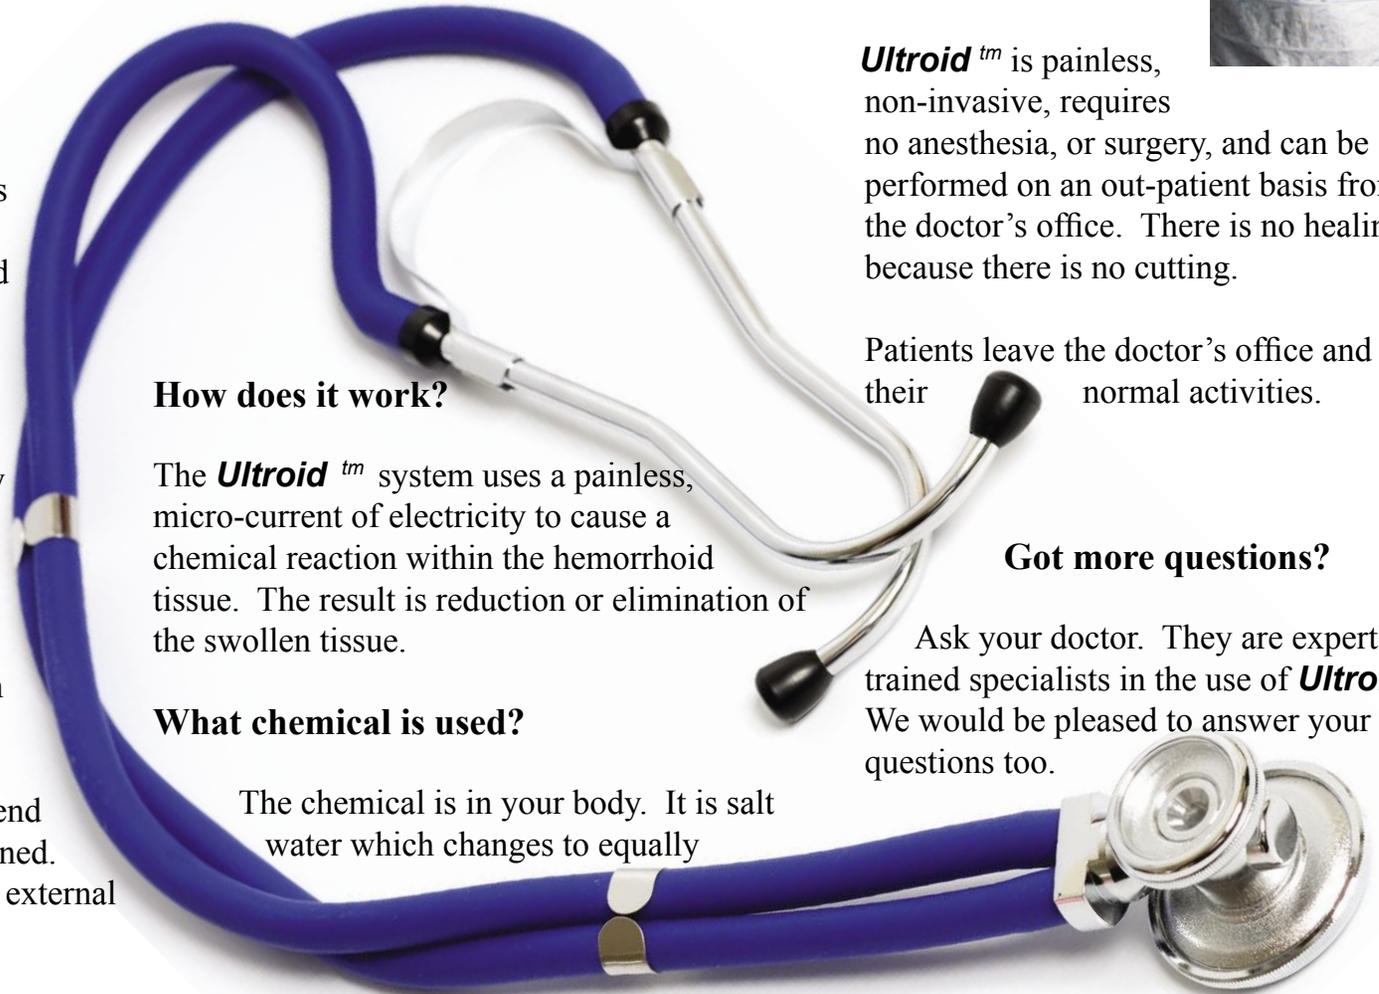

**Ulteroid™** treatment routinely cares for *Grades I-III* and some *Grade IV* hemorrhoids.

## The **Ulteroid™** System

Recognized by the FDA

Safe and painless. You don't have to suffer any longer. **Ulteroid™** requires no special preparation. The cost is a fraction of a hospital stay with surgery. And it is covered by most insurers and Medicare.

### How does it work?

The **Ulteroid™** system uses a painless, micro-current of electricity to cause a chemical reaction within the hemorrhoid tissue. The result is reduction or elimination of the swollen tissue.

### What chemical is used?

The chemical is in your body. It is salt water which changes to equally

harmless sodium hydroxide when the tiny bit of current is applied to the area.

## **Ulteroid™** is a non-surgical choice.

Surgery is an invasive and painful procedure with a prolonged healing process.

It is expensive and time-consuming with healing times that may take weeks.

**Ulteroid™** is painless, non-invasive, requires no anesthesia, or surgery, and can be performed on an out-patient basis from the doctor's office. There is no healing time because there is no cutting.

Patients leave the doctor's office and resume their normal activities.

### Got more questions?

Ask your doctor. They are expertly trained specialists in the use of **Ulteroid™**. We would be pleased to answer your questions too.
